Kaili Hamilton

CAPSTONE 2 | REFLECTION ASSIGNMENT

- I wanted to use Machine Learning to predict a time that a sneaker would be most profitable on the secondary market. I then had to adapt my query to what factors are the most influential in profitability of a sneaker on the secondary market.
- I found out, mathematically, that the brand Off-White x Nike was very influential in increasing the price ratio over Yeezy.
- The main challenge is that I didn't know enough about machine learning, nor about the coding aspect of it, to do this project. On a future project I would like to be trained better in machine learning concepts.
- It was a good experience for me to learn something new. I also liked that I had to recall my AP Stats knowledge from high school – definitely need a refresher but I enjoyed stats.
